Washington 25, D. C. - Price 20 cents

Introduction ^{1/}

The Providence area is 1 of 40 major labor markets in which the Bureau of Labor Statistics is currently conducting occupational wage surveys. Occupations common to a variety of manufacturing and nonmanufacturing industries were studied on a community-wide basis. Cross-industry methods of sampling were thus utilized in compiling earnings data for the following types of occupations: (a) office; (b) professional and technical; (c) maintenance and power plant; and (d) custodial, warehousing, and shipping. In presenting earnings information for such jobs (tables A-1 through A-4) separate data have been provided wherever possible for individual broad industry divisions.

Occupations that are characteristic of particular, important, local industries have been studied as heretofore on an industry basis, within the framework of the community survey. ^{2/} Earnings data for these jobs have been presented in Series B tables. Union scales (Series C tables) are presented in lieu of (or supplementing) occupational earnings for several industries or trades in which the great majority of the workers are employed under terms of collective bargaining agreements, and the contract or minimum rates are indicative of prevailing pay practices. Data have also been collected and summarized on shift operations and differentials, hours of work, and supplementary benefits such as vacation and sick leave allowances, paid holidays, nonproduction bonuses, and insurance and pension plans.

The Providence Metropolitan Area

Total population of the Providence Metropolitan Area (the major urban centers of Rhode Island and the Attleboro and North Attleboro sections of Massachusetts) was almost 750,000 in 1950, an increase of nearly 10 percent since 1940. A third lived in Providence.

^{1/} Prepared in the Bureau's regional office in Boston, Mass., by Bernard J. Fahres, Regional Wage and Industrial Relations Analyst. The planning and central direction of the program was carried on in the Bureau's Division of Wages and Industrial Relations in Washington, D. C.

^{2/} See appendix for discussion of scope and method of survey.

Nonagricultural employment in the area was 293,000 in December 1951. Employment in the 2,360 manufacturing plants in the area was almost equally divided between the durable- and nondurable-goods industries. ^{3/} The major manufacturing industry in the area was textiles. Employment in this industry totaled about 48,000 workers at the time of the study, reflecting a decline of about 9,000 workers from the previous year. Leading durable-goods industries included jewelry, with 23,000 workers, and nonelectrical machinery with 20,000 workers. The machinery industries were engaged, for the most part, in the manufacture of textile machinery and machine tools.

Providence plants manufactured a variety of products in addition to textile goods and jewelry. Among these were canvas and rubber footwear, insulated wire and electrical wiring devices, incandescent and fluorescent lamps, fabricated metal products, watch cases, and optical goods. Other products were garments, industrial chemicals, files, rasps, nuts and bolts, foundry products, and printing and publishing products.

Employment in nonmanufacturing industries almost equaled that of manufacturing. More than 50,000 workers earned their livelihood in retail and wholesale trade, and local, State and Federal Governments employed 30,000 workers. Also of importance in the area were a variety of service industries, in which some 20,000 were engaged, and contract construction, with a working force of 15,000. Almost 14,000 were employed in the fields of transportation, communication, and other public utilities. The finance, insurance, and real estate industries employed an additional 10,000 workers.

Among the industry and establishment-size groups included within the scope of the Bureau's study, slightly over half of the plant workers were employed in establishments having written agreements with labor organizations. The extent of unionization varied widely among the different industry groups studied. In nondurable manufacturing industries, 7 out of 10 employees were covered by union agreements; among durable-goods establishments about two-fifths of the workers were in unionized establishments. Plant workers in nonmanufacturing industries were not extensively covered by union contract provisions, except in the public utilities group where nine-tenths of the employees were covered. In the other nonmanufacturing groups, the extent of union coverage among plant workers was not significant. The extent of union coverage among office workers was slight. Only

^{3/} See appendix table for listing of durable- and nondurable-goods industries.

a tenth of the office workers were employed under the terms of collective bargaining agreements. Unionization of office workers was highest in the public utilities group, where a fifth of the office workers were employed in establishments having collective bargaining agreements covering white-collar workers.

A substantial labor surplus prevailed in the Providence area at the time of the survey. A general slump in the textile industry as well as the problem of material shortages in the jewelry trade accounted, in large part, for this condition. Unemployment in the area totaled 30,000 in December 1951; by the following month it had risen to 35,000.

Occupational Wage Structure

Wage rates of a majority of the plant workers in Providence were formally adjusted upward between January 1950 - the base period for the Wage Stabilization Board's 10 percent "catch-up" wage increase formula - and the time of the study. These general wage increases were substantially more numerous after the outbreak of hostilities in Korea than during the preceding 6-months period. Over the 2-year period, three-fourths of the manufacturing plant workers had received one or more general wage increases, generally amounting to between 14 and 26 cents an hour. Formal wage adjustments were normally larger and more prevalent for plant workers in nondurable goods establishments than for workers in the durable-goods industries. In the nonmanufacturing industries, about half the plant workers had received formal wage advances since January 1950. These increases, in general, ranged from 9 to 16 cents an hour.

General wage adjustments for office workers during this period were somewhat less frequent than those received by plant workers. This, at least in part, results from the customary practice of some establishments of adjusting salaries of office workers on an individual basis rather than by general wage increases.

Formalized rate structures for time workers were reported in establishments employing approximately three-fourths of all plant workers and half of all office workers. Formalized plans providing a range of rates affected approximately the same number of plant workers as did plans providing a single rate for each job. Practically all formal wage plans for office workers provided a range of rates.

Approximately two-thirds of the plant workers in the manufacturing industries were paid according to some form of incentive wage system. Incentive methods of wage payment were negligible in the nonmanufacturing industries, except for commissions paid to salespersons in retail trade establishments.

Almost 90 percent of the plant workers in the area were employed in firms having established minimum entrance rates for inexperienced plant workers. Although minimum entrance rates varied widely among industries surveyed, about half of all plant workers were in establishments with a minimum hourly rate range of between 75 cents and \$1.05. No firm in the manufacturing, public utilities, or wholesale trade divisions reported a minimum of less than 75 cents. In retail trade, half of the workers, and in the service industries, two-fifths of the workers were in firms whose minimum rate was less than 75 cents.

Wages and salaries of office workers in manufacturing industries were generally higher than those in nonmanufacturing. In 20 out of 25 classifications permitting comparison, average salaries of office workers in manufacturing establishments exceeded those in nonmanufacturing plants. For hourly rated plant employees in custodial, warehousing, and shipping categories a similar trend was evident with manufacturing rates exceeding nonmanufacturing in 11 out of 15 cases where comparison was possible. By contrast, average hourly rates for maintenance workers were higher in nonmanufacturing establishments for 8 of 9 occupations permitting comparisons.

A fifth of all plant workers in manufacturing industries were working on late shifts in December 1951. Virtually all late-shift workers were paid a differential over day rates, which was usually set in the form of a cents-per-hour premium.

A: Cross-Industry Occupations

3.

1/ The study covered establishments with more than 7 workers engaged in all types of electroplating, plating, and metal polishing (Group 3468) as defined in the Standard Industrial Classification Manual (1945 edition) prepared by the Bureau of the Budget.

2/ Excludes premium pay for overtime and night work. All occupations were predominantly paid on a time basis.

1/ The study covered establishments with more than 20 workers engaged in nonelectrical machinery industries, except the machine-tool industry (Group 35, except 3541) as defined in the Standard Industrial Classification Manual (1945 edition) prepared by the Bureau of the Budget; machine-tool accessory establishments (Group 3543) with more than 7 workers were included.

2/ Excludes premium pay for overtime and night work.

3/ Includes data for machine-tool accessories (Group 3543) and for textile machinery (Group 3552) for which separate data are presented.

4/ Insufficient data to warrant presentation of separate averages by method of wage payment.

(a) All or predominantly time workers.

(b) All or predominantly incentive workers.

5/ Includes data for operators of other machine-tools in addition to those shown separately.

1/ The study covered insurance carriers (Group 63) with more than 20 workers, as defined in the Standard Industrial Classification Manual (1949 edition) prepared by the Bureau of the Budget.

2/ Hours reflect the workweek for which employees received their regular straight-time salaries and the earnings correspond to these weekly hours.

C: Union Wage Scales

(Minimum wage rates and maximum straight-time hours per week agreed upon through collective bargaining between employers and trade-unions. Rates and hours are those in effect on dates indicated.)

Table C-15: *Building Construction*

January 2, 1952

Classification	Rate per hour	Hours per week
Bricklayers	\$2.888	40
Carpenters	2.250	40

Occupational Wage Survey, Providence, R. I., December 1951
U.S. DEPARTMENT OF LABOR
Bureau of Labor Statistics

Appendix – Scope and Method of Survey

With the exception of the union scale of rates, information presented in this bulletin was collected by visits of field representatives of the Bureau to representative establishments in the area surveyed. In classifying workers by occupation, uniform job descriptions were used; these are available upon request.

Six broad industry divisions were covered in compiling earnings data for the following types of occupations: (a) office clerical, (b) professional and technical, (c) maintenance and power plant, and (d) custodial, warehousing, and shipping (tables A-1 through A-4). The covered industry groupings are: manufacturing; transportation (except railroads), communication, and other public utilities; wholesale trade; retail trade; finance, insurance, and real estate; and services. Information on work schedules and supplementary benefits also was obtained in a representative group of establishments in each of these industry divisions. As indicated in the following table only establishments above a certain size were studied. Smaller establishments were omitted because they furnished insufficient employment in the occupations studied to warrant their inclusion.

Among the industries in which characteristic jobs were studied, minimum size of establishment and extent of the area covered were determined separately for each industry (see following table). Although size limits frequently varied from those established for surveying cross-industry office and plant jobs, data for these jobs were included only for firms meeting the size requirements of the broad industry divisions.

A greater proportion of large than of small establishments was studied in order to maximize the number of workers surveyed with available resources. Each group of establishments

of a certain size, however, was given its proper weight in the combination of data by industry and occupation.

The earnings information excludes premium pay for overtime and night work. Nonproduction bonuses are also excluded, but cost-of-living bonuses and incentive earnings, including commissions for salespersons, are included. Where weekly hours are reported as for office clerical, they refer to the work schedules (rounded to the nearest half-hour) for which the straight-time salaries are paid; average weekly earnings for these occupations have been rounded to the nearest 50 cents. The number of workers presented refers to the estimated total employment in all establishments within the scope of the study and not to the number actually surveyed. Data are shown for only full-time workers, i.e., those hired to work the establishment's full-time schedule for the given occupational classification.

Information on wage practices refers to all office and plant workers as specified in the individual tables. It is presented in terms of the proportion of all workers employed in offices (or plant departments) that observe the practice in question, except in the section relating to women office workers of the table summarizing scheduled weekly hours. Because of eligibility requirements, the proportion actually receiving the specific benefits may be smaller. The summary of vacation and sick leave plans is limited to formal arrangements. It excludes informal plans whereby time off with pay is granted at the discretion of the employer or other supervisor. Sick leave plans are further limited to those providing full pay for at least some amount of time off without any provision for a waiting period preceding the payment of benefits. These plans also exclude health insurance even though it is paid for by employers. Health insurance is included, however, under tabulation for insurance and pension plans.

ESTABLISHMENTS AND WORKERS IN MAJOR INDUSTRY DIVISIONS AND IN SELECTED INDUSTRIES IN PROVIDENCE, R. I., 1/,
AND NUMBER STUDIED BY THE BUREAU OF LABOR STATISTICS, DECEMBER 1951

Item	Minimum number of workers in establishments studied 2/	Number of establishments		Employment
